Ok...

I found this in the "Planning and Architecture for Windows SharePoint Services 3.0 Technology" posted at

<http://technet2.microsoft.com/Office/en-us/library/3e3b8737-c6a3-4e2c-a35f-f0095d952b781033.mspx?mfr=true>

"Windows SharePoint Services 3.0 supports SQL Server authentication and local computer process accounts for farms that are not running Active Directory. For example, you can implement local accounts by using identical user names and passwords across all servers within a farm."

I have done this and it is not working....

"Chris Green" <cgreen@xxxxxxxxxxxxxx> wrote in message news:O0DM145IHHA.448@xxxxxxxxxxxxxxxxxxxxxxxxxxxx

Has anyone one got WSS 3.0 working with a backend database?

I am getting a System.Security.Principal.IdentityNotMapped when trying to configure the backend database.

I created the user "sharepoint" on both servers with the same password and using NTLM to authenticate. When I go through the configuration, the databases get created but something happens during step 2 and fails with the above exception.

Any help will be greatly appreciated.

Thanks
Chris
