No, however I found information in a forum regarding the way IE7 handles the NTLM authentication. There is an option in Tools->Options->Advanced: Enable Integrated Authentication. The forums suggest to uncheck it. I have not tested it yet, so please let me know if this worked for you

Did you ever get a solution to this problem. I'm getting the same issue.

Hi, we have developed some nice Infopath forms which are currently published in a WSS v3 internal site. These forms use

Re: Access denied to Forms using Windows Vista

Windows Integrated  
Authentication  
to connect to a SQL 2005 database and  
fill-in some controls. Accessing the  
forms with Windows XP/2003 works fine,  
however if we use Windows Vista as  
OS,  
we get "Access Denied" messages when we  
load a new form in the wss forms  
library.

I have tested with other user profile and  
found the same problem. One  
particular issue is that our wss site detects  
who the user is and  
correctly  
display his/her name in the upper part of the  
page. However, it cannot  
detect  
group memberships for some libraries or  
lists. Using the same user,  
accessing  
the same site in a Windows XP/2003  
machine, has no problems.

I was searching the Internet and found some  
references about the way Vista  
handles the Windows Integrated  
authentication. It has been changed since  
WinXP, so I would like to know how to fix  
this and where to do it.

Thanks a lot for your help
