This is intentional. A document library is a place for storing documents so therefore you don't need attachments as you do in Lists – instead store the additional documents in the same document library and use a category (or similar) field to tie them together.

Hi!

First, sorry for my english...

Here is the question. We want to attach files (an Excel file) associated with a PDF document, on a Document Library we created on a WSSv3 solution. I can do it on a Calendar List (the system has an option to attach files), but not on a Document Library.

Any idea?

Thank you so much
