Hi Jordi,

Thank you for replying. I did install WSS3 x64 and also ASP.NET x64 yet the problems persisted. I reinstalled ASP.NET 32bit to try and resolve the problem. I could not resolve the issues I was having and there is little information I could find to explain the x64 symptoms I was getting.

After several days of working on this problem, together with other unrelated issues I've had with 64 bit applications, I am currently rebuilding the server using 32 bit.

The network is small, 5 users, and I'm about quarter way through. I hope to be up and running with WSS tomorrow but it will be a late night, again :)

Regards,
Roman

Why dont you install 64 bit versions of WSS and .net framework? You are forcing your IIS to work oin 32 bits mode.

Hi Mike,

It seems 2K3 R2 x64 is feature rich.

The Windows firewall is Off. I scrolled through the Services MSC and stopped the Windows Firewall / ICS Service which was Started – no apparent system change was noted. I don't believe I require ICS for normal client / server operation?

Now, several snippets from the Event Logs after the server reboot earlier this morning. A string of these two events are in the log. I consequently ran the ASP.NET 32 bit install (cscript

Re: WSS3 + Win2K3 x64 Installation Woes

%SYSTEMDRIVE%\inetpub\adminscripts\adsutil.vbs SET
W3SVC/AppPools/Enable32bitAppOnWin64 1 and
%SYSTEMROOT%\Microsoft.NET\Framework\v2.0.50727\aspnet_regiis.exe
-i) and
they stopped. I consequently now have ASP.NET v2.0.50727 (32 bit)
Allowed in
the IIS Web Service Extensions.

Check that the Windows Firewall Service is stopped and set
to disable.

This is something that I saw first with R2 and 2003 with SP2
until then
this "feature" wasn't included.

It continues to catch me out almost every time I install WSS
3.0 or MOSS
2007 on a VM.
