Thanks Mike. Here is my code. I have a form with a command button on it. This is the whole thing,. When I click the button I get a red-x msg box captioned "eReference Embedding" with the message "Unknown Application Version". There is also a VB error message, "Runtime Error -2147417846 (8001010a) Automation Error The message filter indicated that the application is busy"

There is a Reference to Microsoft Excel 11.0 Object Library (EXCEL.EXE)

```
Private Sub Command1_Click()
```

```
Dim oXL As Excel.Application
```

```
Set oXL = New Application
```

```
End Sub
```
