I am reading about DCOM right now. The MS doc at (http://msdn.microsoft.com/library/default.asp?url=/library/en-us/mts/create_9gc9.asp) lists the levels of authentication but let me with some doubts. In respect to the 'Packet Integrity' and 'Packet Privacy' levels, both have encryption capabilities but when does security checking occurs? The other levels states clearly when security checking occurs.

Thanks,
Robert Scheer
