Unless there is a version conflict, you might want to uninstall and reinstall VB6 under an account of a user with admin privs rather than logged on as admin and using the admin account.

Home Of: DevDiagnostics With Safe For Scripting, Safe For Initialization key management

http://www.download.com/DevDiagnostics-with-SafeKeys/3000-2408_4-10438225.html?tag=lst-0-1

DevDiagnostics is a framework that provides an interface to lots of different diagnostic and informational tools. System and network configuration are easily viewed, with links to system tools to change information when appropriate. Safekeys allows you to easily turn on or off the registry settings that allow safe for scripting and safe for initialization. Overall, this tool makes it easy to find information on whatever issues your programs may be encountering on a system.
