We can give you code that does that, but we need to know how you want to handle the highlight bar that appears when a ListBox is clicked. I presume we will highlight the item as it is added and that the highlight will not be permitted in the "blank" area of the list (as there are no items there to highlight). But what do you want to happen if the highlight bar is not at the bottom of the list when a new item is added. Should the item be added at the current location of the highlight bar or should it always be added at the bottom of the list no matter where the highlight bar is? What about deletions from the list? Will they occur at the highlight bar or at the bottom of the list? The more information you give us as to how you want this to function, the better able we are to give you a solution.

Rick
