Hello

I'm using CrystalReports.NET that ships alongwith the VisualStudio.NET 2003 in my application.

I'm using the concept of Subreports to show the parameters and their properties in my application along with the main master report that encloses these subreports.

So far so good... The problem comes when i try to search for a text that is present in the subreports.The crystalreportviewer is not able to find the search text in the subreports.

Can anyone can help finding a text in the subreports.Also the EnableDrillDown property is set to false as per my requirement.

Any help appreciated

Regards
Srivatsa
