I am currently fighting with Crystal and VB, the only thing I can tell you is that you need to have Crystal XI Release 2. This version contains the .net tools. Hope this can help you.

I have Visual Studio 2005 on my PC and it has CrystalDecisions.CrystalReports.Engine, CrystalDecisions.ReportSource, CrystalDecisions.Shared, CrystalDecisions.Web, and CrystalDecisions.Windows.Forms and in the reference tab, they show version 10.2.3600.0. I believe this is version 10 (DUH) that came with VS 2005.

I just upgraded to Crystal XI. I was told that it works with VS 2005. Why doesn't the version files change to 11.0.x.x in the reference tab in VS?

Am I using Crystal 10 or am I using Crystal 11 with VB even though I have installed Crystal XI on my PC.

There is a Crystal XI icon on the desktop and I can bring p the XI development environment in Crystal.

Can someone enlighten me please?

Thanks,

H
