AH HA! You *DO* understand!

:~)

Is there a way to do that via sql?

another way of saying the same thing...via very "pseudo" code

If F1 = '1n' Or F1 = '4B' then

'Order By F2'

Else

...some sql to produce the posted results for '2L' and '3R'

For Each Distinct F2

'Order By F1

Next F2

End If

Try this query:

Select F1, F2

From (

Select F1, F2,

IIf(F1='1n', 1, IIf(F1='4b',3,2)) As Ord1,

IIf(F1='1n' or F1='4b', F1, 100-Val(F2)) As Ord2

From TableName

)

Order By Ord1, Ord2, F1, F2 Desc

Dmitriy.

.
