len()

You are already using len() earlier in your code, are you trying to get something other than the length of the string?

"jamesfreddyc" <jamesfreddyc@xxxxxxxxxxxxxxxxxxxxxxxxxxxx> wrote in message news:C43DD391-E6C2-4652-B473-954A5B43E9FD@xxxxxxxxxxxxxxxxxxx

Is there anyway to determine the length of a string value? As you can see below, "xCriteria" can be 10 characters or many more -- it all depends upon how many values are added to the listbox by the user.

How do I come up with a ineteger number for the length of "xCriteria"?

'This creates a list of species from the lstboxSpeciesListR selection

```
Dim xCriteria_input As String
```

```
Dim xCriteria As String
```

```
xCriteria_input = ""
```

```
For xCnt = 0 To frm_RT_Analysis.lstboxSpeciesListR.ListCount - 1
```

```
If Not frm_RT_Analysis.lstboxSpeciesListR.Selected(xCnt) Then
```

```
If Len(xCriteria_input) > 0 Then xCriteria_input =
```

```
RTrim(xCriteria_input) & ", "
```

```
xCriteria_input = xCriteria_input &
```

```
frm_RT_Analysis.lstboxSpeciesListR.List(xCnt)
```

```
xCriteria = RTrim(xCriteria_input) & ", "
```

```
End If
```

```
Next
```

.
