Hi,

When you get a field from the recordset, what the data type does it return?

For example,

```
My_Variable = My_Recordset("Interest_Rate")
```

Interest\_Rate is Double in the database. However, will the function My\_Recordset("Interest\_Rate") return a Double or a Variant?

Thanks!

```
zzzZ  
(>"*"<)  
(-.-) zzzZ  
("><")
```

.
