Thank you for your response.

I am not sure if it is VSPrinter that is causing this error. This is the scenario. The app runs fine in my desktop but fails in another users..that is why I am not able to debug and get to the point that this is failing.

And also it will be helpful for me if I know what this error is and why is this caused?

I am on a hit and trial method here. Since this behaves differently in two machines.

Any idea is appreciated.

Thank you.
