Note: This is being crossposted to the other newsgroups and it originally started in the microsoft.vb.general.discussion under the title "Visual Studio SP6" by Jim Carlock, dated 3/30/2004.

Thanks Dale!

Going back over these posts, I've noticed that the bug is ONLY occurring on an XP system in the compiled application, when SP6 is installed on the XP system.

Sam McBride originally identified the bug, Maurizio Benvenuti posted a thread on the work around, which consists of a manifest file.

The component involved is the mscomctl.ocx file which houses the ListView control.

I have set up a webpage describing the problem, and there are links on that webpage to two small apps, that were compiled with XP, SP6, as well as the source code.

<http://www.microcosmotalk.com/images/xpsp6/error3.asp>

I don't know if I've missed something. Let me know if something else needs to be added.

In some of my previous threads I have posted that the problem file was mscomctl.dll. That was a mistake, it is mscomctl.ocx.

Previous MSCOMCTL.OCX was:  
6.0.88.62  
Comments: May 11, 2000  
1,066,176 bytes  
New one:  
6.1.97.82  
Comments: Feb 23, 2004  
1,081,616 bytes  
Previous MSVBVM60.DLL was  
6.0.96.90  
Comments: Sep 3, 2002  
1,385,744 bytes  
New one:  
6.0.97.82  
Comments: Feb 23, 2004  
1,386,496 bytes  
System: Win2KPro with SP4  
No problems discovered here yet, either compiled or in the IDE.
