Hi,

I am trying to do a simple program but yet I am lost. I am using http to download a file from the web. there is a ASP/ASP.NET username and password required

I need to download the file and save in a specified folder example C:\NEWFile\ with a different name . example the file name is testproject.zip need to rename the file to testproject.zip.10142004 that is the date the file is downloaded.

```
Me.Inet1.URL = Me.txtURL
Me.Inet1.RemotePort = 82
Me.Inet1.UserName = Me.txtUserName
Me.Inet1.Password = Me.txtPassword
```

```
Me.Inet1.Execute , "GET"
```

Thanks
Dib
