If you have PDFWriter, which ships with Acrobat 5 or older, you could use the code shown at this link:

<http://www.mvps.org/access/reports/rpt0011.htm>

If you have Acrobat 6, you could still use the same code but use some third party software to create the PDF, such as Win2PDF from Dane Prairie, which I have had good luck with. You would set the default printer to Win2PDF instead of PDFWriter.
