-

i'm using sql2k with VB.studio.

when using a sql connection in my code such as

```
dim connect as new sqlconnect(...  
....  
connect.open()
```

in my project, the code ran fine on my local machine, but soon as i moved the project to a network shared folder, and I've got the follow erros:

when try to open the project:

```
=====
```

The project location is not fully trusted by the .NET runtime. This is usually because it is either a netowrk share or mapped to a network share not on the local machine. If the ouput path is under the project loaction, your code will not executed as fully trusted and you may receive unexpected security exceptions.

```
=====
```

and when ran the same project again, I've got another erro about connection:

```
=====
```

An unhandled exception of type 'System.Security.SecurityException' occurred in mscorlib.dll

Additional information: Request for the permission of type System.Data.SqlClient.SqlClientPermission, System.Data, Version=1.0.5000.0, Culture=neutral, PublicKeyToken=b77a5c561934e089 failed.

```
=====
```

I've got the similar error msg when using integrated security in the connection string. The strange thing is both project worked fine on my local machine, but they won't work on network share (I'm logging into the network as myself).

Why did this happen, and how to correct it? The ideal solution for me

need help with a sql connection error in vb .net project

will be no matter where I developed the project, I should be able to
move it to other places and it should continue to work.
thank you guys!
