Hi there, to any one

I'm developing a small program in Visual BASIC 6, to manage and control my collection of post-cards of ships.

I own an EPSON 2840 Photo Scanner, and I was planing to use it to scan my postcards to store them in my program.

The problem is: I don't want to use its interface or any photo application (such Photoshop) but rather I perfer to use my program to do that. Does any one nows of any OCX, DLL or ActiveX control that I can link with my program in order to interface with the scanner so that I can use my program to directly scan the postcard and store it in the program (bare in mind that when I mean store is not within the executable but in a folder).

In other words, I want to have full control of the scanner without using its software or any photo-application.

I'm willing to by it.

Any replys to this news or by email to nelioabreu@xxxxxxxxxxxxxxxx

Thanks
