-

MSDN:

```
=====
' Specifying 1 as the second argument opens the application in
' normal size and gives it the focus.
Dim RetVal
RetVal = Shell("C:\WINDOWS\CALC.EXE", 1) ' Run Calculator.
=====
```

Could you please prove the example about this:

```
=====
Shell ("c:\del *.jpg")
=====
```

Thank you very much.

Best regards,
Boki.
