I suppose it might, but that's not any kind of link I can follow.

If you plug that link into IE (I don't use it either) with the October 2001 CD in the drive it pops right up.

Thanks.

With those, I was able to figure out that all it would take to access the info was simply search a 10/2001 MDSN for "CreateMailslot"

I recommend you stop playing into MS's game – if ever making browser assumptions in the future, assume the other party is /not/ stupid.

My apologies if I've offended you, but I don't recall making any assumptions about your intelligence. If anything it was more a case of absent mindedness on my part. And as for playing into MS' game, I'm in the process of refactoring my bread and butter VB6 app into Trolltech's C++. I've also just refactored my first web site from ASP/SQL Server to PHP/PostgreSQL. :-) So I'm anything ~but~ playing into MS' game any longer.
