Hi all,  
I am using Visual Basic 2005 reporting and when I print the report it looks proper (in the middle of page) in print preview but on the printpage it keeps extra space (approximate 0.45 cm) in right and top. Here I am using reportviewer control on windows form for local report processing.

No matter what name you use while posting, this is a VB Classic group. Questions about dotNet need to be posted to dotNet groups. They all have "dotnet" in their names.
