 - *Date:* 3 Oct 2006 21:26:48 -0700
-

select "date", count(*) as I group by "date" from myTable ?????

so if i choose the date between 01/01/2006 until 18/01/2006
i will know how much recordcount per date on 01/01/2006 , 02/01/2006,
03/01/2006, and more... ???

so where is on the sql statement to tell the informations of the
recordcount per date
look my code

```
start1 = DTPicker1.Value  
start2 = DTPicker2.Value  
strsql = "select * from room where date between #" & Format(start1,  
"MM/dd/yyyy") & "# AND #" & Format(start2, "MM/dd/yyyy") & "#"
```

```
Set rsRoom = New Recordset  
rsRoom.ActiveConnection = con  
rsRoom.CursorType = adOpenStatic  
rsRoom.CursorLocation = adUseClient  
rsRoom.LockType = adLockOptimistic  
rsRoom.Open strsql
```

lblcount.caption = rsroom.recordcount '<== the informations to show the
recordcount

but i dont know how to recordcount per date.
i want to know how much records per date
thanks...
please help me

best regards

```
select "date", count(*) as I group by "date" from myTable
```

Flip the GROUP BY and FROM clauses....
