

Where has M\$ hidden the TabStrip control?

W2KProp + SP3
VisualStudio6.0 EnterpriseEdition + SP3 (=NOT= .NET)

I'd like to use a TabStrip control in my VB6 app.
Supposedly this control lives in the "Microsoft Custom Controls 6.0"
found in the list under Project->References.
But I don't find this reference in my environment. Googling for
"Microsoft Custom Controls 6.0" only turns up two hits, both from a
learn-VB6-fast book and none from M\$ itself. Odd.

So where can I find this control? Has it been moved into some other
Reference? Or where can I get this Reference?

TIA,

Still-Learning Steve
