oops... copy and paste error:

```
Print #ff, "DIR /o:g /b > "" & TempFile & ".txt""
```

Should be:

```
Print #ff, "DIR /o:gn /b > "" & TempFile & ".txt""
```

To sort on file names....

LFS

Larry,

I am now using arrays which is a little faster. Yes, I do have 10,746 files in one of my backups. :-)

I don't usually comment code until I know it works, as I am constantly changing and rearranging it, but I do not comment enough and will try to improve on that in the future. I know I have gone back to some of my old code and it took awhile for me to figure out how it worked.

—

Norm

Don't blame me, my programming is self-taught and my teacher was not very experienced. :-)
