Hey, I'm cobbling together a little utility here, and thought I'd use it as an excuse to come up to speed with SendInput. What I can't really seem to find are any intelligible samples out there for this function. Am I missing something really obvious, or did this one just pass the ClassicVB crowd by?

Solved the problem of the shifted-cursor keys! Free clue found here:

<http://www.xtremevb.com/archive/index.php/t-203863.html>

D'oh!!!

Seemingly fully-functional sample now available here:

<http://vb.mvps.org/samples/code/SendInput.zip>

Hope to have a description ready soon, and would prefer future links point, here:

<http://vb.mvps.org/samples/SendInput>

Thanks... Karl
