I am using vbasic 5.

In the list of available components under Project>Components I have 5 different Microsoft Windows Common Controls:

Microsoft Windows Common Controls 5.0 (SP2) ----> COMCTL32.OCX

Microsoft Windows Common Controls 6.0 (SP6) ----> mscomctl.ocx

Microsoft Windows Common Controls-2-5.0 (SP2) ----> comct232.ocx

Microsoft Windows Common Controls-2-6.0 (SP4) ----> Mscmct2.ocx

Microsoft Windows Common Controls-3 6.0 (SP4) ----> comct332.ocx

Question 1:

Why do I have so many of them and where they all come from?

Question 2:

They are all not the same. In another thread I have described my problems with ListView control.

Which one will work the best with my vbasic?

or

Which one should I use with my project?

Question 3:

Is it up to me which one to select? How about Microsoft license requirements?

Question 4:

What are the differences between them? Is it possible to see some summary describing them?

Do they come with the same number of controls? The same properties?

Is it just a bug fix or something else?

Your coments are deeply appreciated,
Jack

Re: Question about Microsoft Windows Common Controls component

I created a list for my use because I can't remember where each control is.
Here is a breakdown of what is on my VB(sp5)

5.0 (SP2) COMCTL32.OCX

Tab Strip

Toolbar

Status Bar

Progress Bar

Tree View

List View

Image List

Slider

6.0 (SP6) MSCOMCTL.OCX

Same as above plus

Image Control

2-5.0 (SP2) COMCT232.OCX

Animation

UpDown

2-6.0 (SP6) MSCOMCT2.OCX

Same as above plus

Month View

Date and Time Picker

Flat Scroll Bar

Re: Question about Microsoft Windows Common Controls component

3 6.0 (SP5) COMCT332.OCX

Cool Bar

Good luck

Harold
