Ehh, just a stupid question, but why if u have the code not lift to vb5-6-.net? (c#, java, hascel, ada, smalltalk, assembler, pure MSIL, comal, pascal, forth, bliss, php, python, fjölnir... whatever...)
convert to more recent compilers when there is still time, but now i did offend some of the meta-fortran programmers and cobol gurus out there... shure we had a run at converting f77->f90 and its a days work or two, but then thats what u are hired for...
my first attempt to vb4->vb5 caused a mscomm to be a picturebox :) so its a bit tricky...
