Hello,
I do not know why, but when I shift development window (ide) from the main monitor to the secondary monitor, the mouse right click does not pop up any menu, I needed for some Copy & Paste operation.
I have tried the same with other applications, including Notepad and the mouse right click pop up is there all the time.
Only visual basic ide has that pop up disabled.
Anyone knows about that problem and how to resolve it?
I am using visual basic 5.
.Thanks,
Fred

Swap your monitor positions.

The IDE, unlike VB itself, seems to have a problem with certain kinds of signed values.

Any time the screen coordinates go negative, I have had such troubles.

Never found a way around it, except by adjusting the relative positions of my screens so that the primary monitor is uppermost and leftmost.

Bob
