I think his main problem is that he doesn't distinguish these three cases:

- he knows for sure,
- he is fairly certain, or
- he is making a wild-assed guess.

For example: "A VB form is a top-level window and I am nearly certain they don't receive focus either."

IMO you either /are/ sure, or you

- test it yourself before you comment, or
- make it clear that your comment is just an educated guess, or
- keep quiet, & read what others have to say.

Just my 2c :-)

TC
