Hi..

I need to add new context menu for my computer. That particular menu will call the my dll.

I am able to do this for folder and drive but I am not able to add to my computer.

the key for my computer i found is :

{20D04FE0-3AEA-1069-A2D8-08002B30309D}

under this key for shell I have added my new key and given the value as GUID of my dll.

When click on that menu its give error "Cant found location" and if i give the path of the dll then it gives error as "it is win32 console application"

Please let me know how can I add context menu for my computer which will invoke my DLL.

Ashwin

.
