I'm making a call to GetRecordInfoFromGuids() and getting this error -2147319765 (Element not found.). Not sure what this error means in this context. As a side note I tried calling GetRecordInfoFromGuids() initially using __uuidof(MyStruct) as the fifth argument but the compiler gave me:

error C2787: 'MyStruct' : no GUID has been associated with this object

so I packed my GUID into a GUID struct and passed that. Could this be the source of my problem?

Thanks,
Drew
