

Several Problems with Attribute handling in ATL with VS2005

Hi,

I have created an attributed project in VC++/ATL 8 and added some existing classes. Now I'm facing several problems, all related to the Attribute handling:

1+2) Two IDL method definitions do not result in the correct IDL-code. I have filed bug reports for both of them. In the meantime I would like to know if there's a way to write those two methods verbatim to the IDL file. I tried idl_quote but had no success. Hopefully I'm just missing something here

3) Some attributes do not recognize the C++ preprocessor. I'm using those classes in several projects. To share them successfully I have moved all project specific settings to an include file. Most attributes recognize the preprocessor but some don't (importlib for example). Is that so or am I missing something here as well?

Regards

Uwe
