Hi Pieter,

Thanks for your reply!

> *My goal is to keep things simple for the developers by allowing them to use*  
> *literal strings, and then building a tool to strip the strings from the*  
> *binary at compile time.*

We do really understand your goal and concern on this problem, however there are no such technology or approach available at this time(except the WPP you mentioned), we will pass your concern to the dev team.

By the way, I noticed one community member has posted a response to the same issue in the group [microsoft.public.vc.debugging](http://microsoft.public.vc.debugging), please check it there.

Thanks for your understanding!

Best regards,
