Good for you ! I wrote a peace at 13 as well but back then
it was on a Commodore 64 using Basic =] .

I'd like to invite you to consider getting a book on c++
and write small Console applications to start. If you take the road
that goes through VisualC++ you need to learn a lot more then c++.
For exemple you'd have to learn about using the Enviroment, the APIs,
libraries that are build-in.. All of wich require you a clear understanding
of C++ to begin with... It can be done but its realy like trying to hammer
a nail with a pencil.

But you have all the time you need to decide what you want to do realy ;)
