Hi all,

A read-only data file is read in a C/C++ program.
And I use stdio function such as fopen() to fread() to operate the file.

The content of the data file is constant.

How to build the file into exe file?

I work on MS windows. I use Visual C++ 6.0.

Someone suggest me to use "resources file" in VC. I am new to it. Can you give some tutorial of it, thanks.

Any suggestions will be appreciated!

Best regards,

Davy
