

Re: Help is needed to compile C program using Visual Studio 2005

Error information:

Error 1 fatal error C1853: 'Debug\Filter.pch' precompiled header file

is from a previous version of the compiler, or the precompiled header is C++ and you are using it from C (or vice

versa) c:\0-filter\filter\filter.c 66

Line 66 points --> #include "stdafx.h"

When I excluded statement:

```
#include "stdafx.h"
```

Error information:

Error 1 fatal error C1010: unexpected end of file while looking for

precompiled header. Did you forget to add '#include "stdafx.h"' to your

source? c:\0-filter\filter\filter.c 445

I don't know what to do to correct the situation.

Do not remove the #include "stdafx.h" stuff. Leave Visual Studio, delete all "Release" and "Debug" directory, as well as any .pch and .ncb file in the project folder. Restart Visual and rebuild.
