When i convert the code of the application which was made in the VS2003 into the VS2005 i got stuck, now it doesn't get compile . what needs to make it run.

As my crystal ball is a little rusty these days, I am not sure wether the error is line 417 or 235...

Seriously, no one can help you if you don't describe a minimum your problem! What error message do you have exactly? What source code is concerned?
