Thanks a lot. That worked perfectly!!

Ben Voigt wrote:

That probably won't work as desired; your cygwin environment won't be set properly.

Try instead to run the command line:

```
bash --login -c "cd whateverdirectory && make"
```

cygwin is a collection of executables and make(or gmake) is one of them; Use either exe launcher APIs to launch <cygwin-dir>/bin/make.exe with the makefile as cmd line arg.

Hi,

I need to launch a makefile in Cygwin from a VC++ program. How do I do that?

I can launch just Cygwin using ShellExecute() or CreateProcess(), but I can't figure out how to pass the makefile to Cygwin once it launches.

Thanks

Does cygwin allow a parameter for a command to run? If so,

Re: Launching Cygwin through VC++

pass it in.

Otherwise look at cygwin. Maybe you can change the login script to run

the
makefile.
