Hi,

I agree with Dave Lowndes. In addition, it seemed that your call stack was not intact. The callstack was all about system dlls, could you please post more related call stack information regarding your THIRDPARTYMETHOD for further research?

Also, I am little confused that you said that if you switched back to Release mode, you would lose debugging functionality. You can also debug your application even with Release mode which enables optimizations and generates less (or no) extra debug data.

Look forward to your response. If you have any other questions or concerns, please feel free to let us know.

Best regards,
Charles Wang

<http://msdn.microsoft.com/subscriptions/managednewsgroups/default.aspx#notifications>

If you are using Outlook Express, please make sure you clear the check box "Tools/Options/Read: Get 300 headers at a time" to see your reply promptly.

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.
