Dear Candidates,

We have urgent opportunities with our client, Juno Online Services Development Pvt Ltd, (www.juno.com) Hyderabad and they need urgently Sr Project Leads / Project Leads – Java / J2EE with 4 to 9yrs of experience in Java / J2EE. I am giving below the JD for your ready reference.

Location: Hyderabad, India

Salary Range: Competitive with the market

POSITION QUALIFICATION REQUIREMENTS

Education: Requires B.Tech / M.Tech / degree from good institutions with consistent academic performance.

Experience:4– 9 years experience in software development and operations.

POSITION SUMMARY

Mission: Design, develop, implement and maintain efficient software – that is scalable, reliable and robust – for assigned projects.

Duties:

1. Understand requirements through regular interaction with concerned stakeholders working from multiple locations.
2. Come out with design for the various requirements and seek approval of applicable executives.
3. Ensure development of the software after design is approved and undertake periodic reviews.
4. Ensure thorough quality testing and documentation of the software developed before deployment into Production.

Urgent Requirement for Sr.Project Lead with US MNC Juno Online System

5. Update team on the latest trends in technology to help improve the software developed.
6. Supervise and mentor assigned software developers (3–4). Interact with other departments to ensure that the software developed is adequately meeting requirements.

Skills & Qualifications:

1. Proven skills in taking a project through conceptualizing to implementation and maintenance stage.
2. Demonstrated ability of leading a team and motivating them to higher levels of performance.
3. Programming – Core Java and J2EE technologies (JSP and Servlets), Junit testing frameworks, Scripting languages like PERL, XML related Technologies and Database programming (SQL, PLSQL, JDBC)
4. Development under environments like Eclipse/JBuilder on Unix/Linux platforms
5. Design/support high performance Web applications
6. Code coverage and optimization tools like Optimizeit
7. Internet protocols for email and web–based applications
8. Object–Oriented analysis & design; experience with formal methodologies like UML
9. Good Relational database concepts
10. Should have managed independently at least one project/sub–system with 3 –4 developers from start to finish (requirements formulation to deployment & support)
11. Good communication skills; competent to work with teams across multiple locations.

Kindly go through the above job description and let me know your interest in this opportunity.

Look forward to hear from you at the earliest.
