No problem there. Your C4288 does look like a bug in the Express Edition, but try defining the member functions to see if you still get it in a legal program. If you do, you can report the problem here:

<http://connect.microsoft.com/feedback/default.aspx?SiteID=210>

Done.

<https://connect.microsoft.com/VisualStudio/feedback/ViewFeedback.aspx?FeedbackID=294236>

Thanks.

See also if there is an updated version or service pack to apply, as the problem doesn't occur in the (patched) full version of VC2005.
