```

I have compared your C/C++ tab settings with the one I have here (VS2005 / Win32), and I can see one small difference, not sure how important it may be.

In my case the /Fd is followed not by a folder name, but rather by a file name, like:

```
/Fd"..\Profile2005\vc80.pdb"
```

The Program Database File Name field in C/C++ / Output files in the IDE is set to: \$(IntDir)\vc80.pdb , which seems to be the default value for new projects.

Perhaps this helps. If not, I suggest creating a small new project first and check if you are able to debug it. If you are, then add various elements from your large project step by step until it goes wrong.

Cheers  
Ondrej

I used Windows XP 64 bit build environment (Debug) from PSDK for windows 2003 R2 to port my application, and created the suitable configuration and made all the necessary settings to the configuration. In fact I was able to compile and link the application without any errors.

Re: does not contain debug information. Press OK to Continue

Re: does not contain debug information. Press OK to Continue

My problem is I am getting a message "does not contain debug information. Press OK to Continue" when I try to debug the application with or without breakpoints.

So, have you built the Debug configuration of your project?  
Dave

Hi Dave,

I created two more configurations in Build+Configurations+Add, one for Release & another for Debug.

I also modified the settings accordingly, Infact there are no compile errors or linker errors, I successfully built the application without any errors in both DEBUG & RELEASE configurations.

The application is a SETUP/INSTALLATION application which is reporting some errors in the runtime. So I want to debug it. The errors are caused by "RegOpenKeyEx" call in the source code. So I want to debug the application.

I am working on a Dual core intel CPU, installed Windows XP 64 bit operating system, installed VC++ 6.0 and latest SDKS (Windows 2003 PSDK R2) which contains build environment for Windows XP 64 bit platform. I am building it for AMD64 CPU architecture.

Thanks for replying Dave.

Hi Dave,

For more clarity I am posting the settings of "C/C++" tab & "Link" tab of "project settings" property sheet in VC++ 6.0.

My application name is "PortSetup", it installs another application on Windows os.

I named my configurations as follows DEBUG\_AMD64 & RELEASE\_AMD64.

Settings in AMD64\_DEBUG configuration:

C/C++ Tab Settings:

```
/nologo /MTd /W3 /Gm /Zi /Od /I "." /I "..\Includes" /I "..\ServiceInstaller" /D "WIN32" /D "_DEBUG" /D "_WINDOWS" /D "_MBCS" /FR"Debug_AMD64/" /Fp"Debug_AMD64/PortSetup.pch" /Yu"stdafx.h" /Fo"Debug_AMD64/" /Fd"Debug_AMD64/" /FD /EHsc /Wp64 /c
```

Link Tab Settings:

Re: does not contain debug information. Press OK to Continue

Re: does not contain debug information. Press OK to Continue

```
bufferoverflowU.lib /nologo /subsystem:windows /incremental:yes /  
pdb:"Debug_AMD64/PortSetup.pdb" /debug /machine:I386 /out:"Debug_AMD64/  
PortSetup.exe" /machine:AMD64
```

Settings in AMD64\_RELEASE configuration:

C/C++ Tab Settings:

```
/nologo /MT /W3 /O2 /I "." /I "../Includes" /I "../ServiceInstaller" /  
D "WIN32" /D "NDEBUG" /D "_WINDOWS" /D "_MBCS" /FR"Release_AMD64/" /  
Fp"Release_AMD64/PortSetup.pch" /Yu"stdafx.h" /Fo"Release_AMD64/" /  
Fd"Release_AMD64/" /FD /EHsc /Wp64 /c
```

Link Tab Settings:

```
bufferoverflowU.lib /nologo /subsystem:windows /incremental:no /  
pdb:"Release_AMD64/PortSetup.pdb" /debug /machine:I386 /  
out:"Release_AMD64/PortSetup.exe" /machine:AMD64
```

Thanks in advance for all the help.
