Sounds like a file system issue. Is the .rc file marked read-only and/or system?

Hi all,

I have recently upgraded from VC2003 to 2008. When I make changes to a dialog by adding buttons, etc., and try to save the resource (Ctrl S) , or just try to build/rebuild the project (when the .rc file has to be saved anyway), instead of saving the .rc file, it offers me to overwrite it, and then fails to overwrite since the file is already open (duh). Has anyone experienced this problem? As long as my editing does not involve changes to the dialogs everything compiles fine.

Any help would be greatly appreciated!
