TheClassFile.h

```
class Blah_Fooh
{
public:
    enum eModule
    {
        eBlah1 = 0,
        eBlah2 = 1,
        eBlah3 = 2,
    };

    Blah_Fooh();
    virtual ~Blah_Fooh();

    bool AFoohFooh( CString &data, enum Blah_Fooh::eModule module );
};
```

TheClassFile.cpp

```
...

bool Blah_Fooh::AFoohFooh( CString &data, enum Blah_Fooh::eModule
module )
{
    bool result=false;
    ...
    ...
    return result;
}
```

I have created the above class in my project. I have a method (above) in which the parameter is an enum which works fine. My only concern is that in the WorkSpace in the IDE I would open up this class Blah_Fooh and try to access the above method, by clicking on it, I would get the popup that says "Cannot find the definition (implementation) of this function".

microsoft.public.vc.mfc: IDE problem

Why is it doing this? how can I fix it?
