Hi all,

I am new to ole/com. I have dialog based application in which i have inserted shdocvw.dll activex component. I can load html,doc,and other documents. via

```
m_shBrowser.Navigate((LPCTSTR)m_sPathUrl , &vtEmpty, &vtEmpty,  
&vtEmpty, &vtEmpty);
```

It loads succesfully. (if i open .doc file then winword.exe is loaded in task manager. ?)

Now I want to capture LBUTTONDOWN,RBUTTONDOWN, MOUSEMOVE message....

I have tried with message map macros IT Works when there is no document loaded. But when i load/open any document then I am not able to get any of above message. i have tried with DefWindowProc() handler also but with no luck.

I have searched on net but havent found reason WHY?

and also not found how to do above.

Can anyone guide me how to capture above and such messages?

i dont want to display mouse when it is on the browser control.... and also not want to generate default menu.. instead display my menu.... can anyone point how can i implement?

do i have to create ole eventsink? if so then how?

Thank in advance.

Jetli
