Sorry Tom. I know where they are now. But the folder contains only documentation, no executables. So I think that item is not what I am looking for. What I need is the platform SDK executables.

Tony

Did you get the latest SDK? On that page it says:

"This SDK does not support working with Microsoft Visual C/C++^ŷ, 6.0 as support for VC 6.0 has ended."

<http://www.microsoft.com/downloads/details.aspx?FamilyId=A55B6B43-E24F-4EA3-A93E-40C0EC4F6>

If so you could go back to the previous one off of your MSDN discs if you have them or if you retained the previous download.

It might be something as simple as recompiling the whole solution as well as perhaps a prototype has changed.

Hi,

After I added MS SDK (software development kits)'s path to studio's options/directories, I got the

Re: SDK issue

following compile error message:

```
error C2668: 'InlineIsEqualGUID' : ambiguous call to overloaded function
```

InlineIsEqualGUID() is an ATL function, which didn't cause any problem before. My C++ studio is quite old, VS 6.0 professional edition. Could some one help out with the compile error? Thanks.

Tony
