if you are not mixing and its **new** code, a pure managed language is superior to C++.

C++/CLI **is** a pure managed language.

Maintaining and developing in C++ is more expensive/costly than say C#.

I disagree. If you are a proficient C++ programmer who doesn't know C# it is going to be much easier to learn C++/CLI than C# ... and you end up working in a more powerful language.

OTOH If your goal is to start by taking a bunch of non-programmers and training them to program then I agree that the learning curve is going to be less for a small language like C# ... but why would you start there?

Cheers,
Daniel.
