- 

if i create a managed app in vc++ .net 2005 which would happen?

- 1- creates a native exe or dll that uses .Net as library
- 2- creates a .Net Managed exe or dll exactly like what c# does

for performace consideration i need to run native to run in the kernel of my app but also use .Net library (like forms class ADO .NET) because of the rich capabilities. anyway i can do it in vs 2005?
