Oops, typo detected! ;)

```
COleVariant Filename(_T("c:\\Temp.html"));
ExecWB(OLECMDID_SAVEAS,OLECMDEXECOPT_DODEFAULT,Filename,NULL);
```

How about this:

```
COleVariant Filename(_T("c:\\Temp.html"));
```

```
ExecWB(OLECMDID_SAVEAS,OLECMDEXECOPT_DODEFAULT,Filename,NULL);
```

Hi,

In want to use the ExecWB method of the webbrowser activeX control from microsoft.

```
void CWebBrowser2::ExecWB(long cmdID, long cmdexecopt, VARIANT*
pvaIn,
VARIANT* pvaOut)
```

I want to SaveAs a webpage using the cmdID = IDM_SAVEAS.
I don't know how to initialise the VARIANT* pvaIn variable to store the pathname of the file to save the webpage. It is a VT_BSTR and pbstrVal must be initialised, but i dont know how to initialise a VARIANT*.

Re: ExecWB and VARIANT

Please help.
